

Steve Peca– Technical Director

Steve provides operational and technical support for all groups within the ArtiFlex business model. Steve has been a director of advanced engineering, tool and die, stamping, assembly, quality, dimensional control, and operations. He has been a lead in multi continental automotive launch and operational start up efforts. Steve directed and launched both brown field and green field automotive stamping and assembly plants. He has thirty-eight years' experience focusing on all disciplines of automotive body in white manufacturing, especially early feasibility development through manufacturing operational excellence.

Major Accomplishments and Milestones:

- Journeyman machinist with bachelor's in business
- Requested by AIAG and accepted a position as one of the directing board members during the white light introduction stage into the Automotive Industry.
- Appointed to and assisted U.S. Space engineers to incorporate advanced manufacturing processes into the space program.
- Recipient of the U.S. Presidential service award.
- Recipient of a letter of appreciation from Ford Motor Company for assisting with the successful development and launch of the aluminum F – 150.
